Phase 1: Surface Collection

Methodology

Sampling of area conducted on foot in order to find any cultural materials that would have not been destroyed by agriculture

Results

0 lithics found.

0 faunal

0 floral

0 pottery

Owner

John Lamont

Notes

- Tilling from agricultural practices has essentially destroyed any remnants of what site would have been on the parcel.
- Hilltop to the north had also been disturbed at some point.
- Was determined to be destroyed for continuing research.
- Landowner had claimed to have recovered an axed head and pottery from the parcel, of which none was observed by the surveyors.
