3 meter intervals between surveyors.

Results

0 lithics found.

0 faunal

0 floral

0 pottery

Owner

Robert King

Notes

- Fieldwork on 10/19/2013 was surface collection of the removed beanfield crop
- Corn crop has yet to be surveyed.
- Project area is within the center of Alpha site LEI
- Surrounding and adjacent fields within the alpha site also yielded little to no cultural material
- Shovel testing may be another approach necessary to determine the validity of an archeological site for LEI
